MN moves into next tier of COVID-19 vaccinations

Now that Minnesota has vaccinated more than 70% of its 65-plus population against COVID-19, Gov. Tim Walz has expanded vaccine eligibility. Beginning today, Essentia Health and other systems across the state are cleared to begin immunizing those in Tier 2 of Phase 1B, including people with specific underlying health conditions (sickle cell disease, Down syndrome, active cancer treatment, immunocompromised from an organ transplant, oxygen-dependent chronic lung or heart conditions); essential workers in food-processing plants; and those with rare conditions or disabilities that put them at higher risk of severe illness. This smaller group is expected to take about a week to work through, after which we will move into Tier 3, comprised of people aged 45 and older with one or more of the following underlying medical conditions:

- Active cancer
- Chronic kidney disease
- COPD
- Diabetes (Type 1 or 2)
- Heart conditions (heart failure, coronary artery disease or cardiomyopathies)
- Immunocompromised state from HIV, bone marrow disease, chronic steroids for more than 30 days, immunodeficiency disease or taking immunosuppressive medications

- Obesity
- Pregnancy

Tier 3 also includes Minnesotans at least 50 years old in multi-generational housing, as well as essential frontline workers in agriculture, airport staff, additional child care workers not previously eligible, correctional settings, first responders, food production, food retail, food service, judicial system workers, manufacturing, public health workers, public transit and U.S. Postal Service workers. Essentia Health has begun notifying patients through MyChart and by phone that they are eligible to schedule their vaccination as part of the next tier. We will return to a randomization process, pulling eligible patients who are on MyChart or on the wait list as we work through notifications for this next group. In addition to Tiers 2 and 3, which include about 1.8 million Minnesotans, people who are at least 65 remain eligible for the vaccine. Those folks can self-schedule their appointment through MyChart or by calling (833) 494-0836. Supplies of the vaccine are very limited but are expected to increase in the weeks and months to follow. Essentia Health plans to accept all vaccine supply allocated by state health departments to provide to our patients. Potential side effects of the COVID-19 vaccine include fatigue, sore arms and low-grade fever. These are similar to side effects from other vaccines. Essentia Health plans to follow Centers for Disease Control and state health department guidelines for COVID-19 vaccine distribution.

Cub Scout Pack 89: "Scouting for Food"

Your local Cub Scout Pack 89 will be participating in the "Scouting for Food" drive. Due to pandemic restrictions, you may find a door hanger on your front porch beginning March 13-19 asking for your food donations that will benefit the local food shelf. Instructions will be on the hanger should you choose to participate. Scouts will then come around on March 20th beginning at 9 a.m. to pick up donations from your front porch. There will need to be no interaction with the scouts and they will not knock on your door due to person to person restrictions. If you find a door hanger on your door and feel compelled to assist those in need we thank you for your participation in this project.

Cub Scout Pack 89 gathered on Thursday, February 11th to partake in the annual Pinewood Derby. There were all shapes and sizes of cars for this event which created a little heat during the intense cold weather that was taking place. The tournament was held in a one-on-one double elimination event which pitted 11 cars against each other. Henry Swanson was strong throughout the race with six straight wins. Second place Cory Dibblee came charging back from a third round loss to Swanson to get to the Championship. Megan Lofgren finished third with a very impressive 4-2 record. Congratulations Scouts on your hard work! From Left to right: Cory Dibblee- Second Place; Henry Swanson- First Place; and Megan Logren- Third Place.

There will be no school at Win-E-Mac on Friday, March 19th.

Patriot Senior Gavin Walker recently scored his career 1000th point during the Win-E-Mac vs. Mahnomen boy's basketball game. Congratulations Gavin! Pictured with his parents, Angie and Gary.

The Cub Scout Pack #89 recently held their Annual Pinewood Derby. Each participant made their derby car and brought it to the tournament to compete. Group photo: (L-R) Henry Swanson, McKenzie Lofgren, Megan Lofgren, Silas Lee, Chandler Bailey, Bridger Huschle, Hudson Swanson, Dean Morin and Scout Jareth Walk. Grieving complicated relationships

by Heather Larson, LSW, CT

When it comes to grief, we often think of the loving relationship we had with the person who died, and the deep sadness and longing we feel when they are gone.

But what happens when the relationship was not so good? What happens when we don't feel sad or long for the person who has died, but instead feel nothing or a sense of relief?

Grief is a companion to loss, and it's experienced in a variety of forms. One may feel they are not grieving or don't have a right to grieve a complicated relationship. This is not the case. You have a right to grieve even if the relationship was difficult. Your grief may feel confusing and as complicated as the relationship that was lost.

If the relationship with the person involved both good and difficult times, the survivor may experience a range of emotions, including sadness, relief, numbness or even gratefulness. Complex feelings, such as anger, disdain and guilt, may also surface for you.

All these grief reactions are natural and have their place in the healing process. It's important to acknowledge them and allow yourself to feel all the emotions.

Consider the reality of the situation and the factors you could and couldn't control in your relationship. If the person who died hurt you, relief may be the natural reaction to their death. At times, the feeling of relief leads to feelings of guilt. Feeling relieved after someone has died doesn't mean you're a bad person; it means that bad things have happened within your relationship. Give yourself permission to feel all of the emotions. Often, this is what is needed and will help begin the healing process.

When grief is complicated by our relationship with the person who died, forgiveness can be an important component to one's grief.

We don't always get the opportunity for forgiveness prior to someone's death, but that doesn't mean the chance for forgiveness is lost. Forgiveness is often about bringing peace to our own hearts, and this may be just as, or more important, after the person dies. One way to approach this is to write a letter to the person or go to a place of memorial, like the gravesite or a place unique to the person, and read the letter out loud.

In other circumstances, you might need to communicate something you were unable to say while the person was living. Death can present the opportunity to share these feelings. The process of expressing your emotions even after the person died can be healing.

It's helpful to find a good outlet to share how you're feeling, such as a trusted friend, family member or grief professional. You may also consider journaling about your grief experience.

Vehicle maintenance tasks drivers don't want to overlook

Savvy drivers recognize that maintenance is essential to keeping their vehicles running strong for years on end. Such maintenance ensures vehicles are safe to take out on the road, and basic upkeep also protects drivers' financial investments in their cars and trucks.

Drivers who are not mechanically inclined tend to put their vehicles in the hands of a trusted mechanic to perform routine maintenance like oil changes. But there's a host of simpler vehicle maintenance tasks that drivers don't want to overlook, some of which can be performed without visiting the auto body shop.

- Brake inspections:** Brake inspections are best left to the professionals, who can check the thickness of brake pads and look for other indicators of excessive wear. The automotive resource Cars.com recommends having brakes inspected during routine tire rotations, which many automotive professionals suggest should be done every six months.
- Car wash:** Car washes might not be the first task drivers associate with vehicle maintenance, but they can prevent long-term damage to cars and trucks. Damage from bird droppings and road salt and ice melt products in the winter can damage a vehicle's paint job and its undercarriage. Wash the car on your own at home or visit a professional car wash to perform this simple yet vital maintenance at regular intervals and whenever you notice significant buildup of dirt and grime on the car's exterior.
- Air filter:** The air filter on a car or truck prevents debris, dirt and other contaminants from getting into the engine. The auto insurance experts at Allstate® advise drivers to inspect their vehicle air filters once a year. Air filters in need of replacement may appear dirty, and reduced fuel economy, unusual engine sounds and reduced horsepower are some other potential indicators that an air filter needs to be replaced.
- Windshield wipers:** Windshield wiper blades are easily overlooked, but various automotive experts recommend replacing wiper blades every six to 12 months. Old wiper blades won't perform at peak capacity, dramatically reducing visibility during heavy rain and snowstorms. Anyone can replace their own windshield wiper blades in a matter of minutes, and new blades won't break the bank.

Vehicle maintenance is not exclusive to tending to what's under the hood.

Change to the 2021 Noxious Weed List

*Emilie Justen, Minnesota
Department of Agriculture*

The Minnesota Department of Agriculture (MDA) has made one change to the state's 2021 Noxious Weed List.

The designation of the non-native subspecies of phragmites (*Phragmites australis* spp. *australis*) has changed from Restricted to Prohibited Control.

Though the list typically changes once every three years, the MDA is making this change due to a delay resulting from the Noxious Weed Advisory Committee (NWAC) 2019 recommendation to change the status.

The regulations do not apply to Minnesota's native subspecies of phragmites (*Phragmites australis* spp. *americanus*). The Minnesota Aquatic Invasive Species Research Center (MAISRC) has information on distinguishing between the two subspecies.

You may also work with your local county agricultural inspector for help in determining which subspecies you may have observed. County agricultural inspectors are great resources for plant identification at the local level and can be connected with biologists at the University of Minnesota, the MDA, and other state agencies for help with identification.

As the lead agency for noxious weed regulation, the MDA, with recommendations from NWAC, updates the state's Noxious Weed List.

The Noxious Weed List places weeds into four categories, Prohibited Eradicate, Prohibited Control, Restricted, and Specially Regulated Plants, and defines how the weeds must be controlled. Plants are placed on the Noxious Weed List because they may be harmful to public health, the environment, public roads, crops, livestock, or other property.

To view the updated Noxious Weed List and to learn more about the category definitions, go to the MDA website.

Prohibited Control weeds are more widespread than Prohibited Eradicate weeds.

Prohibited Control weeds must be eliminated before they mature and spread through seeds, cuttings, and other plant parts. Efforts must be made to prevent seed maturation and dispersal of plants into new areas. Additionally, no transportation, propagation, or sale of these plants is allowed.

Non-native phragmites is a semi-aquatic perennial grass that grows in wetlands, lakeshores, streambanks, and marshy areas. It can reach heights of 15 feet and forms dense clonal stands. The stems are hollow, ridged, and rough in texture.

Flowers develop in August and form dense, feathery clusters that are typically purple in color. Roots and rhizomes (underground stems) can spread more than 10 feet horizontally and several feet deep. It also produces a high number of

seeds.

With its extensive underground system and seed production, it outcompetes native plant species and degrades wetlands by reducing the movement of sediment.

Management of non-native phragmites can be challenging. A combination of mowing, herbicide treatments, and following up with additional herbicide treatments and controlled burns have been successful.

The University of Minnesota (U of M) has conducted research on management tactics and has recommendations available to the public. Make sure to check state pesticide laws if applying herbicide near water.

To treat phragmites submerged in water, obtain a permit from the Minnesota Department of Natural Resources.

The MDA, Department of Natural Resources, Minnesota Pollution Control Agency, and researchers at the U of M are working with wastewater treatment facilities in the state that use non-native phragmites in their remediation ponds. Wastewater treatment facilities adhering to state approved best management practices for preventing spread will be exempt from the Noxious Weed Law until research identifies suitable alternative plant species, with the ultimate goal of enacting a phase-out of the use of non-native phragmites in wastewater treatment facilities.

3 techniques to keep mosquitoes out of your backyard oasis

The value of a retreat-like backyard was never more apparent than in 2020.

Over the last year-plus, much of the world has been forced to stay home as a global pandemic has claimed millions of lives while countless others have had to fight to survive in hospitals.

It's no surprise people have looked for a respite from the harsh realities of living during a deadly pandemic, and many turned their attention to their own backyards to provide such an escape.

The online home remodeling platform Houzz reported a 58 percent annual increase in project leads for home professionals in June 2020. Contractors who specialize in outdoor spaces saw the biggest increase in demand.

A revamped outdoor space can provide the perfect retreat for homeowners who want to get away from it all. But one winged, unwelcome guest can quickly transform an oasis into an uninviting space.

Mosquitoes make their

presence felt in many areas each summer. These pesky, often hungry insects can carry disease, and their bites can be painful and itchy. Homeowners can try these three techniques to keep mosquitoes out of their backyards.

1. Remove standing water.

Standing water is a breeding ground for mosquitoes, who don't even need a lot of water to successfully breed. A daily walk around the property may uncover kids' toys, empty flower pots or other small receptacles that can collect water. Even clogged gutters can lead to the accumulation of a small amount of water, and that can be enough for mosquitoes to breed. Remove these potential breeding grounds when you find them, and do so each day, as mosquitoes mature from eggs to nymphs in roughly four days.

2. Mow regularly.

Mowing the lawn so the grass never gets too high is another way to make a backyard less hospitable to mosquitoes.

The pest experts at Terminix® note that mosquitoes seek tall grass to protect them from the elements, including wind and hot summer sun. Mowing enough so grass never gets too high in summer can make backyards less inviting to mosquitoes.

3. Plant with mosquitoes in mind.

The home remodeling experts at HGTV note that plants can be part of homeowners' strategy to repel mosquitoes. Various plants have mosquito-repellant qualities. For example, bee balm releases a fragrance as it grows, and mosquitoes don't like that fragrance. Homeowners can speak with a local lawn and garden professional for recommendations about plants that can thrive in their region and repel mosquitoes at the same time.

Mosquitoes can make it hard to enjoy a backyard oasis. But various strategies can help homeowners keep these unwanted guests out of their backyards.

Knowledge Bowl 2021: Knowledge Bowl had a whole new look this year! Due to COVID 19, Knowledge Bowl in person was not possible, so early in the school year the organization that runs the Knowledge Bowl program in Minnesota began to explore options. After much research and trial and error it was decided that Knowledge Bowl 2021 would be done virtually using a messaging platform called Discord, which allows players from all over the state of Minnesota to compete both from their individual school or from home if they are distance learning. Win-E-Mac was able to have a complete season with 6 regular meets and a sub region competition. Because we were one of the top 9 teams at the sub region meet Win-E-Mac advanced to the Regional Competition which was held on March 10. Members of the 2021 Knowledge Bowl team are: Seniors Gavin Haskett, Alex Jacobson, Delvin Morel, Reed Neubert and Noah Ostenaar, Juniors Anton Hickman and Teagan Paulson and Sophomores Kallie Hand, Jayden Gensburger and Nadelly Neubert. Congratulations to Alex Jacobson who was named All-Region and to Gavin Haskett who was named Honorable Mention All-Region. The Knowledge Bowl team would like to especially recognize Delvin Morel who took over the daunting task of operating the Discord program during all of the meets.

Open gym will be on Sunday's. Masks are required at all times. Elementary Students are welcome to attend from 3:00-4:30 p.m. High School students can attend from 4:30-6:00 p.m. High school students should not come before 4:30 p.m.

Yearbook staff is still taking pre-orders for this year's book titled "One Way... or Another" to be distributed upon completion in May of 2021. Cost is \$40.00. Yearbooks can be purchased in the office or from Mrs. Winter (room 51) before or after school or during students' noon hours

Win-E-Mac School is currently signing kids up for Preschool Screening. We will be having our screening in the McIntosh Bjella Building on Monday, March 22nd by appointment only. Preschool screening is open to all children who are three years old and up who have not been screened. Children must be screened before entering Kindergarten. Families interested can contact Win-E-Mac School office at 218-563-2900 or Heather at 218-689-0605 email: hearls@win-e-mac.k12.mn.us

Grace Kaupang, Senior with her parents, Vance and Terri during Girls Basketball Parent's Night recently held at Win-E-Mac School.

Patriot Emily Strom and her parents, Sarah and Matt during Parent's Night held at Win-E-Mac School on Thursday, March 11th.

Liveah Kiecker with her parents Kevin and Jenessa during Girls Basketball Parent's Night.

WEM After-Prom party donations

The Win-E-Mac Junior Class has been given the go ahead to host Prom 2021 once again. (Due to COVID, Prom 2020 was cancelled)

The kids are very excited to have some normalcy back in these unprecedented times. Prom is going to look slightly different this year, but we are hoping to make it a fun and safe night once again for our youth!

The Junior Class parents

will be hosting a fun night of food, games, and prizes for the prom attendees and we are looking for contributions to make this a memorable event for our kids.

If you are interested in donating (cash or prizes) to the Win-E-Mac After Prom Party, please send your donation to: Win-E-Mac School, Attention: Alyssa Hickman, 23130 345th ST SE, Erskine, MN 56535

Savahanna Svalen with her parents, Joey and RaeAnn at Win-E-Mac Girls Basketball Parent's Night last Thursday evening.

Kallie Hand and her parents, Ben and Ashley Hand and Jennifer Wang during Parent's Night for girls basketball at Win-E-Mac School on Thursday, March 11th.
